Contents

Preface ix

CHEMISTRY AND PHYSICS OF CRYSTALLIZATION

Continuing adventures in lysozyme crystal growth
M.L. Pusey 1

Determination of monomer concentrations in crystallizing lysozyme solutions
L.J. Wilson and M.L. Pusey 8

Interactions between lysozyme molecules under precrystallization conditions studied by light scattering
M. Skouri, J.-P. Munch, B. Lorber, R. Giegé and S. Candau 14

Controlling nucleation in protein solutions
R.C. DeMattei and R.S. Feigelson 21

Kinetic studies on the growth of three crystal forms of lysozyme based on the measurement of protein and Cl^- concentration changes
A.V. Elgersma, M. Ataka and T. Katsura 31

Dynamic light scattering analysis of solutions from which lysozyme crystals grow
J.B. Bishop, W.J. Fredericks, S.B. Howard and T. Sawada 41

Optimizing protein crystallization by aggregate size distribution analysis using dynamic light scattering
F. Thibault, J. Langowski and R. Leberman 50

Phase diagrams of a crystalline membrane protein, bovine heart cytochrome *c* oxidase, in the salting-in region
M. Ataka, K. Shinzawa-Itoh and S. Yoshikawa 60

Fluorescence study of precrystallization of ribonuclease A: effect of salts
M.-P. Crosio and M. Jullien 66

Lysozyme crystal growth studied by atomic force microscopy
S.D. Durbin and W.E. Carlson 71

Investigation of crystal surfaces on organic layer lattice structures and protein structures using scanning tunneling microscopy and atomic force microscopy
W. Littke, M. Haber and H.-J. Güntherodt 80

Observation of lattice defects in orthorhombic hen-egg white lysozyme crystals with laser scattering tomography
K. Sato, Y. Fukuba, T. Mitsuda, K. Hirai and K. Moriya 87

Laser scattering in a hanging drop vapor diffusion apparatus for protein crystal growth in a microgravity environment
G.A. Casay and W.W. Wilson 95

Light scattering of proteins as a criterion for crystallization
M. Zulauf and A. D'Arcy 102

Protein crystals and their stability
J. Drenth and C. Haas 107

THEORY OF CRYSTAL GROWTH AND PACKING

Theory of growth and morphology applied to organic crystals; possible applications to protein crystals
P. Bennema 110

Size effects in models for mechanically-stressed protein crystals and aggregates
D.A. Noever 120

An efficient and possibly general packing mode for crystals of B-DNA oligonucleotides
G. Minasov, V. Tereshko, B. Chernov and L. Malinina 136

Mutant insulin crystal packing
B. Xiao, G.G. Dodson, E.J. Dodson, J. Clarkson, J. Turkenburg, U. Derewenda, L. Brady and J. Brange 144

Factors affecting the morphology of isocitrate lyase crystals
R.C. DeMattei, R.S. Feigelson and P.C. Weber 152

OPTIMIZING CRYSTALLIZATION CONDITIONS

Two approaches to the rapid screening of crystallization conditions
A. McPherson 161

A versatile reactor for temperature controlled crystallization of biological macromolecules
B. Lorber and R. Giegé 168
Microbatch crystallization under oil – a new technique allowing many small-volume crystallization trials
N.E. Chayen, P.D. Shaw Stewart and D.M. Blow 176
Experiences with HANGMAN: a macromolecular hanging drop vapor diffusion technique
J.R. Luft, V. Cody and G.T. DeTitta 181
Growth of protein single crystals in a periodically changing solubility gradient: description of the method and first results
W. Heinrichs, M. Heinrichs and H. Schönert 186
The growth of yeast thiolase crystals using a polyacrylamide gel as dialysis membrane
J.Ph. Zeelen and R.K. Wierenga 194
Crystallization of human prostatic acid phosphatase using biphasic systems
R. Kuciel, C.G. Jakob, L. Lebioda and W.S. Ostrowski 199
Crystallization of bovine pancreatic polypeptide in the presence of crystalline diglycidyl ether of bisphenol A (Araldite): epitaxy or covalent nucleation?
S.P. Wood, R.W. Janes, E. Sweeney and R.A. Palmer 204
The effects of acid treatment and calcium ions on the solubility of concanavalin A
E. Cacioppo and M.L. Pusey 208
Matrix coprecipitating and cocrystallizing ligands (MDD ligands) for bioseparations
M.J. Conroy and R.E. Lovrien 213
Variation of lysozyme solubility as a function of temperature in the presence of organic and inorganic salts
J.-P. Guilloteau, M.M. Riès-Kaut and A.F. Ducruix 223
Crystal transfer experiments carried out with crystals of trypanosomal triosephosphate isomerase (TIM)
R.K. Wierenga, J.Ph. Zeelen and M.E.M. Noble 231
Dynamic telerobotic control of crystallization experiments
K.B. Ward, W.M. Zuk, M.A. Perozzo, M.A. Walker, G.I. Birnbaum, W. Kung, A. Cavaliere, D.R. Uffen and H. Scholaert 235

SAMPLE PREPARATION AND PURIFICATION

Preparative fast purification procedure of various proteins for crystallization
S.X. Lin, B. Sailofsky, J. Lapointe and M. Zhou 242
Efficient expression and purification of a protease from the common cold virus, human rhinovirus type 14
L.E.-C. Leong, P.A. Walker and A.G. Porter 246
Purification, sequence and crystallization of an anti-tissue factor Fab and its use for the crystallization of tissue factor
W. Ruf, E.A. Stura, R.J. LaPolla, R. Syed, T.S. Edgington and I.A. Wilson 253
Studies on engineering crystallizability by mutation of surface residues of human thymidylate synthase
H.E. McElroy, G.W. Sisson, W.E. Schoettlin, R.M. Aust and J.E. Villafranca 265

PROTEIN COMPLEXES

Strategies in the crystallization of glycoproteins and protein complexes
E.A. Stura, G.R. Nemerow and I.A. Wilson 273
Derivatization of ribosomes and of tRNA with an undecagold cluster: crystallographic and functional studies
S. Weinstein, W. Jahn, M. Laschever, T. Arad, W. Tichelaar, M. Haider, C. Glotz, T. Boeckh, Z. Berkovitch-Yellin, F. Franceschi and A. Yonath 286
Systematic investigation of crystallization parameters for protein–nucleic acid complexes: application to an active truncated form of *Escherichia coli* topoisomerase I
P.C. Weber, C.-X. Zhu and Y.-C. Tse-Dinh 293
Strategies for crystallization of large membrane protein complexes
S. Yoshikawa, K. Shinzawa-Itoh, H. Ueda, T. Tsukihara, Y. Fukumoto, T. Kubota, M. Kawamoto, K. Fukuyama and H. Matsubara 298

ASSESSING CRYSTALLIZATION EXPERIMENTS

A PC-based spreadsheet for tracking results of crystallization experiments
L.I. Hannick, M.A. Perozzo, L.W. Schultz and K.B. Ward 303

A comparison between protein crystals grown with vapor diffusion methods in microgravity and protein crystals using a gel liquid–liquid diffusion ground-based method
T.Y. Miller, X.M. He and D.C. Carter 306

MICROGRAVITY AND CRYSTALLIZATION

Experiment equipment for protein crystallization in μg facilities
R. Bosch, P. Lautenschlager, L. Potthast and J. Stapelmann 310
Practical aspects of crystal growth experiments on board EURECA-1
H.P. Schmidt, W. Koerver and B. Pätz 317
Crystal growth of ribonuclease S under microgravity
K. Asano, S. Fujita, T. Senda and Y. Mitsui 323
Crystallization of two bacterial enzymes on an unmanned space mission
R. Hilgenfeld, A. Liesum, R. Storm and A. Plaas-Link 330

ANTIBODIES

Cloning, bacterial expression and crystallization of Fv antibody fragments
J.-L. Eiselé, G. Boulot, V. Chitarra, M.M. Riottot, H. Souchon, A. Houdusse, G.A. Bentley, T.N. Bhat, S. Spinelli and R.J. Poljak 337
Monoclonal antibodies to insulin and to the insulin receptor (anti-ID) modify the morphologies of insulin crystals
O. Markman, D. Elias, L. Addadi, I.R. Cohen and Z. Berkovitch-Yellin 344

CRYSTALS OF SPECIFIC PROTEINS

Crystal growth of plant calmodulin
J. Wegerhoff and G. Wagner 351
Crystallization studies on HIV-1 reverse transcriptase
L.F. Lloyd, P. Brick, D.M. Blow and Lou Mei-Zhen 355
Crystals of intact elongation factor Tu from *Thermus thermophilus* diffracting to 1.45 Å resolution
L.S. Reshetnikova, N.K. Schirmer, C.O.A. Reiser, H. Berchtold, R. Storm, R. Hilgenfeld and M. Sprinzl 360
Single crystals of chimeric T7/T3 RNA polymerase with T3 promoter specificity
R. Sousa, Y.J. Chung, B.-C. Wang and E.M. Lafer 366
Studies towards the crystallization of the rod visual pigment rhodopsin
W.J. de Grip, J. van Oostrum and G.L.J. de Caluwé 375
Highly ordered crystals of channel-forming membrane proteins, of nucleoside-monophosphate kinases, of FAD-containing oxidoreductases and of suger-processing enzymes and their mutants
G.E. Schulz, M. Dreyer, C. Klein, A. Kreusch, P. Mittl, C.W. Müller, J. Müller-Dieckmann, Y.A. Muller, K. Proba, G. Schlauderer, P. Spürgin, T. Stehle and M.S. Weiss 385
Crystal quality and inhibitor binding by aspartic proteinases; preparation of high quality crystals of mouse renin
M. Badasso, B.L. Sibanda, J.B. Cooper, C.G. Dealwis and S.P. Wood 393
